

CONTENTS

1	INTRODUCTION	1
1.1	A Little History	1
	References	4
2	THE HYDROLOGIC CYCLE	5
2.1	An Engineering Representation	5
2.2	The Global Water Budget	7
2.3	The Engineering Problem	8
	Problems	10
	References	10
3	TRANSPORT PROCESSES IN THE ATMOSPHERE AND OCEANS	13
3.1	Conduction	13
3.2	Convection	16
3.3	Radiation Physics	26
3.4	Shortwave Radiation	33
3.5	Longwave Radiation	42
3.6	Radiation Measurement	46
	Problems	47
	References	48
4	PHYSICAL COMPOSITION OF THE ATMOSPHERE	51
4.1	Structural Groupings	51
4.2	Constituents	52
4.3	Profile of the Troposphere	52
4.4	Atmospheric Moisture	55
4.5	Pseudoadiabatic Processes	62
	Problems	64
	References	65
5	PHYSICAL COMPOSITION OF THE OCEANS AND LAKES	67
5.1	Chemical Composition of Seawater	67
5.2	Physical Properties	68
5.3	The Mechanism for Vertical Heat Distribution	71
	Problems	78
	References	78
6	ENERGY BALANCE OF THE EARTH	79
6.1	Heating and Cooling of the Earth	79
6.2	Oceanic Heat Flow	83
	Problems	89
	References	90

7	A LITTLE PLANETARY FLUID DYNAMICS	91
7.1	Velocity and Acceleration in a Moving Coordinate System	91
7.2	Specialization for Fluid Motion on the Earth's Surface	94
	Problems	100
	References	101
8	CIRCULATION OF THE ATMOSPHERE	103
8.1	Introduction	103
8.2	Observational Description of the General Circulation	104
8.3	Equations of Motion	116
8.4	Conservation Conditions	124
8.5	Energy Transformations	130
8.6	Description of the Predominant Disturbances	133
8.7	Physical and Numerical Models	143
8.8	Summary	143
	Problems	144
	References	144
9	GENERAL CIRCULATION OF THE OCEANS	147
9.1	Introduction	147
9.2	Primary Currents	147
9.3	Secondary Currents	151
	Problems	153
	References	154
10	CLIMATIC VARIABILITY	155
	Problems	158
	References	158
11	PRECIPITATION	159
11.1	Requisites for Precipitation	160
11.2	Mechanisms for Cooling	160
11.3	Nucleation Phenomena in Cloud Formation	163
11.4	Nuclein in the Atmosphere	167
11.5	Growth of Water Droplets and Ice Crystals	168
11.6	Rainfall	172
11.7	Snowfall	178
11.8	Precipitation Induction by Cloud Seeding	179
11.9	Precipitation Measurement	179
11.10	The Stochastic Nature of Point Precipitation Records	183
11.11	Storm Structure	191
11.12	Time Distribution of Point-storm Precipitation	194
11.13	Topographic Effects on Precipitation	195
11.14	Areal Variation of Storm Rainfall	195
11.15	Maximum Rainfall	199

11.16	Geographical Distribution of Precipitation	201
11.17	Interception	201
	Problems	206
	References	207
12	EVAPORATION AND TRANSPIRATION	211
12.1	Evaporation from Saturated Surfaces	211
12.2	Transpiration	223
12.3	Potential Evapotranspiration	226
12.4	Evaporation from Dry, Cropped Surfaces	234
12.5	Consumptive Use	235
12.6	Sublimation	236
12.7	Reduction of Water Loss	237
12.8	Instrumentation	237
	Problems	238
	References	239
13.	SNOWMELT	243
13.1	Structure of Snowpack	243
13.2	Thermal Properties of Snowpack	247
13.3	Snowpack Heat Capacity	248
13.4	Snowpack Thermal Quality	249
13.5	Snowpack Liquid-Water Content	249
13.6	Snowpack Heat Budget	252
13.7	Combined Radiational Melt	253
13.8	Condensation Melt and Sublimation	254
13.9	Convective Transfer Melt	255
13.10	Conduction Melt	256
13.11	Advection Melt	257
13.12	Summary	257
	Problems	258
	References	259
14	INFILTRATION AND GROUNDWATER FLOW	261
14.1	Introduction	261
14.2	Conservation of Mass	267
14.3	Equations of Motion	271
14.4	Permeability Coefficients	273
14.5	Summary of Steady, Incompressible Flow Equations	279
14.6	Summary of Unsteady Flow Equations	280
14.7	Hydraulic Properties of the Porous Media	282
14.8	Infiltration and Capillary Rise	291
14.9	Percolation	299
14.10	Evaporation from Bare Soil	300
14.11	Equations for Groundwater Flows	305
14.12	Growth of a Groundwater Mound	310

14.13	Damping of a Groundwater Mound	312
14.14	The Coupling of Groundwater and Streamflow	313
14.15	Measurements	318
	Problems	319
	References	321
15	SURFACE RUNOFF AND STREAMFLOW	325
15.1	Introduction	325
15.2	Equations of Motion	326
15.3	Simplification of Equations	329
15.4	Some Special Cases	331
15.5	Overland Flow	337
15.6	Effect of Infiltration on Overland Flow	344
15.7	Subsurface Components of Runoff	348
15.8	Effective Catchment Parameters	349
15.9	Flow in Small Streams	350
15.10	Solution for Flow in Small Streams with $tr < tc$	353
15.11	Flow in Streams of Higher Order	359
15.12	Flood Routing	363
15.13	Measurements	364
	Problems	364
	References	366
16	THE CATCHMENT	369
16.1	Introduction	369
16.2	Definition of Runoff Systems	370
16.3	Characterization of the Channel Network	371
16.4	Catchment Planform	377
16.5	Structure of the Channel Network	380
16.6	Catchment Relief	386
16.7	Morphological Indices of Hydrologic Behavior	388
16.8	Summary	391
	Problems	392
	References	392
APPENDIX A	UNITS OF MEASURE, PHYSICAL CONSTANTS, AND MATERIAL PROPERTIES	395
A1	Units of Measure	395
A2	Physical Constants	397
A3	Material Properties	398
APPENDIX B	SOLAR ALTITUDE IN TERMS OF DECLINATION, LATITUDE AND TIME OF DAY	403
B1	Definitions	403
B2	Computation of Solar Altitude	405
	References	405

APPENDIX C	USEFUL SOLUTIONS TO THE ONE-DIMENSIONAL DIFFUSION EQUATION	409
C1	The Error Function	409
C2	Solution Space	412
C3	Constant Diffusivity with External Sources	412
C4	Constant Diffusivity with Distributed Internal Sources	417
	References	418
APPENDIX D	GLOSSARY OF SYMBOLS	419
	Index	442
